

## Special lubricants

### **AUTOL ZAHNRADSPRAY**

**Special lubricant** for versatile applications.

**AUTOL ZAHNRADSPRAY** is a lubricant containing solid lubricants, extreme pressure additives, adhesive properties and corrosion inhibitors.

The dry lubrication film is effective against wear and reduces the engine noise, it has a good grip and bending strenght, does not attract dust or dirt and is water resistant (also sea water).

Due to the content of solid lubricants in **AUTOL ZAHNRADSPRAY** emergency running properties are guaranteed up to 300°C.

Before the first application of this lubricant the lubricating points have to be cleaned down to the bright metal. A renewal of the lubricating film is only necessary if the bright metal becomes visible again.

#### **Applications:**

**AUTOL ZAHNRADSPRAY** can be used for the lubrication of open toothed gearings, gear racks, gear rims, slideways, drive chains or wire cables.

Apply **AUTOL ZAHNRADSPRAY** sparingly and only start work after the solvent is vaporised. The application temperature is between -20°C and +50°C.

Please observe the manufacturer's specifications when selecting products.
