For safety reasons unsuitable extinguishing agents: Water with full jet.

5.2 Special hazards arising from the substance or mixture: Formation of toxic gases is possible during heating or in case of fire.

5.3 Advice for fire fighters:

Protective equipment: Wear self-contained respiratory protective device. Wear fully protective suit.

### Section 6. Accidental release measures.

6.1 Personal precautions, protective equipment and emergency procedures: Wear protective clothing.

6.2 Environmental precautions: Do not allow product to reach sewage system or any water course. Inform respective authorities in case of seepage into water course or sewage system. Do not allow to enter sewers/surface or ground water.

DNEL (Derived No Effect Level) for Workers:		
64742-54-7 Distillates (petroleum), hydrotreated heavy paraffinic		
Inhalative	Long-term – local effects, worker	5,4 mg/m <sup>3</sup> (worker)

- Additional information: The lists valid during the making were used as basis.
- 8.2 Exposure controls:
- Personal protective equipment:
- General protective and hygienic measures: Wash hands before breaks and at the end of work.
- Respiratory protection: Not required.
- Protection of hands: Wear gloves for the protection against chemicals according to EN 374.  
Oil resistant gloves  
Material of gloves:  
Nitrile rubber, NBR; PVC gloves, Neoprene gloves.  
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.  
Penetration of the glove material:  
For continuous contact we recommend gloves with breakthrough time of more than 240 minutes with preference for > 480 minutes where suitable gloves can be identified. For short-term/splash protection we recommend the same, but recognise that suitable gloves offering this level of protection may not be available and in this case a lower breakthrough time may be acceptable so long as appropriate maintenance and replacement regimes are followed.  
Glove thickness is not a good predictor of glove resistance to a chemical as it is dependent on the exact composition of the glove material.  
The exact breakthrough time has to be found out by the manufacturer of the protective gloves and has to be observed.
- Eye protection: Goggles recommended during refilling.
- Body protection: Protective work clothing.
